

WHAT IS CLAIMED IS:

1. An automatic analyzer, comprising:

a conveying line for conveying a sample supplied from a sample introduction section;

at least one analysis unit for analyzing the sample conveyed by said conveying line;

a sample storage section for storing the sample analyzed by said analysis unit; and

a central control device for comprehensively controlling said sample introduction section, said conveying line, said analysis unit, and said sample storage section,

wherein said central control device has separation means for separating said analysis unit from the control of said central control device.

2. The automatic analyzer according to Claim 1, wherein said central control device comprises the function of turning off the power source for said analysis unit separated from the control of said central control device.

3. The automatic analyzer according to Claim 2, wherein said central control device comprises the function of again turning on the power source for said analysis unit separated from the control of said central control device.

4. An automatic analyzer, comprising:

a conveying line for conveying a sample supplied from a

sample introduction section;

at least one analysis unit for analyzing the sample conveyed by said conveying line;

a sample storage section for storing the sample analyzed by said at least one analysis unit;

a central control device for comprehensively controlling said sample introduction section, said conveying line, said at least one analysis unit, and said sample storage section; and

display means for displaying said sample introduction section, said conveying line, said at least one analysis unit, said sample storage section of said automatic analyzer in respective predetermined sections,

wherein said automatic analyzer has a function for specifying any one of the predetermined sections displayed on said display means, thereby separating said specified section from the control of said central control device.

5. The automatic analyzer according to Claim 4, further comprising a function for enabling said specifying any one of the sections displayed on said display means to be repeated, and thereby perform switching between the separation of the specified section from the control of said central control device and the reconnection thereof to said central control device.
